

On the leading edge of energy efficiency

This home meets or exceeds both Energy Star and WaterSense certifications with a number of advanced energy-efficient features. Outside, under the home's low-maintenance cement siding, a tight, moisture resistant barrier wraps in heat and keeps out cold. A fortified and enhanced insulation package, specially designed to address any gaps, voids and compression, seals in more heat. All penetrations are carefully filled to create a continuous barrier to eliminate leaks or drafts. Energy Star-rated windows, add beauty and even more energy efficiency. So do the Energy Star-rated heating and air conditioning systems, which are "right sized" for the home. Add our LED bulbs and Energy Star-rated fixtures and your home becomes an energy miser. Finally, in the spirit of providing a truly healthy home, we use low-VOC paint and low-VOC carpets.
